

# SSG Industrial Wide-temperature UPS 1.5kVA to 3kVA, 120/230Vac Rack/Tower

## Superior Protection for a Wide Range of Applications

Harsh industrial environments demand an on-line industrial UPS. Falcon's on-line industrial SSG® UPS is specifically designed with high-grade components, plastics and batteries to provide superior protection in stressful environments. The SSG delivers continuous, clean power required by sensitive microprocessor-based equipment, SCADA, PLCs, VFDs and networks.

## Industrial Wide-temperature UPS Operates from -20°C to 55°C (-4°F to 131°F)

The SSG is one of the only UL 1778, UL 508, cUL and CE approved UPSs to operate from -20°C to 55°C, far beyond the limited 0°C to 40°C temperature range of office-grade UPSs. In addition, unlike off-line and line-interactive designs, Falcon's on-line UPS acts as an electronic firewall between the incoming "dirty" power source and your sensitive equipment. Its double-conversion, on-line design regenerates continuous, clean, tightly regulated power regardless of the incoming power anomalies.

## 12-Year Rated Batteries Reduce Servicing

Batteries are the lifeblood of all UPSs. All SSG models are equipped with 12-year rated batteries when installed in an ambient 25°C (77°F) environment and offer a 4-year battery life in a 50°C (122°F) location. In contrast, most UPSs typically need batteries replaced every 1 to 2 years in high temperature environments. The SSG's batteries reduce costly battery replacements, servicing and downtime.

When battery replacement is required, simply slide out the user-replaceable, hot-swappable battery pack and replace with a new one. Replacement is accomplished while the UPS continues to power the critical load and without having to remove the UPS from the equipment rack.

#### **Optional Frequency Converter**

The SSG is factory-configurable for use as a 50Hz or 60Hz frequency converter, making it the ideal choice for worldwide power applications.

## RS-232, USB & SNMP/HTTP UPS Management

With the supplied UPSilon® software, all models support unattended shutdown, UPS management, data logging and a power diagnostic tool. The software supports Windows® and other major platforms. For UNIX users, UPSilon is available as an option. Falcon also offers an optional SNMP/HTTP agent board.

## Remote Emergency Power Off (REPO)

The SSG is equipped with an NFPA-70, NEC 645-11 compliant REPO interface, assuring code compliant integration. If REPO is not required, remote output receptacle control is a factory configurable option. This allows outlets to be remotely controlled using a wired connection with a remote switch.

#### **Features & Benefits:**

- \* Certified UPS: UL 1778, UL 508, cUL and CE approved from -20°C to 55°C (-4°F to 131°F)
- Avoids product safety and liability risks
- \* On-line industrial UPS design
- Prevents costly failures ensuring the highest level of uptime
- \* Tested and designed with robust components and plastics
- Assures reliable operation in stressful environments
- \* Hot-swap, 12-year rated batteries
- Reduces battery replacements and costs
- \* External Battery Banks
- Hours of battery backup time
- \* Unique optional SNMP Agent
- Unlimited shutdown client license

## Quick Facts: Falcon's SSG Industrial Wide-temperature UPS Family

- 1. **Industrial On-line UPS** Ruggedly designed for harsh environments. All plastics, batteries and electronics are rated to operate in extreme temperatures.
- 2. **Wide-temperature Range** Agency Certified: UL 1778, UL 508, cUL and CE approved to operate from -20°C to 55°C (-4°F to 131°F).
  - Many UPSs are rated from 0°C to 40°C, or are not agency certified at the wide-temperature range listed in their specs; they offer no guarantee to operate reliably in harsh environments.
- 3. NEMA-Rated Enclosures and Many Other Options— Ready-to-install indoor/outdoor UPS systems one of the only UPSs with all agency certifications. Other options: conformal coating of internal boards, powder coating of enclosures and more.
- 4. **Batteries that Reduce Servicing, Downtime and Costs—** 12-year rated batteries with a 4-year life at 50°C. In industrial environments, other UPSs typically require battery replacements every 1 to 2 years.

Extended Battery Runtimes-Add minutes, hours or days of backup time.

5. **True On-line UPS Design**— Many UPSs are office-grade, including line-interactive UPS designs that are mislabeled as "industrial on-line." These are not reliable to use in industrial settings. Falcon has a 25-year field-proven track record as a leader in on-line UPS design.
